Location: Navan town and surrounds, Navan

The Screening for Appropriate Assessment was carried out by Fehily Timoney Consultants and their screening conclusion states that;

“The proposed installation of 58 CCTV poles and mounted cameras in across the town of Navan, alone and in combination with other plans and projects, is unlikely to have significant effect(s) on the River Boyne and River Blackwater SAC (002299) and SPA (004232) (or any other European site), when considered in light of the conservation objectives of those European sites. No Source-Pathway-Receptor for a significant effect exists due to small scale of the project, the urban nature of the CCTV pole locations and the short duration of works of less than one day for the installation of each pole.

For these reasons we therefore submit that the competent authority can determine that, in view of best scientific knowledge, an appropriate assessment is not required in order to

*ascertain if the proposed CCTV poles and mounted cameras, in combination with other plans and projects, will not adversely affect the integrity of a European site.
Mitigation measures to reduce or avoid a significant effect where not considered within this screening for appropriate assessment to reach this conclusion."*

Having regard to this screening report, it is considered that Meath County Council can determine that the proposed development will not affect the integrity of any designated site.

The assessment as reported is adopted as the determination of Meath County Council.
